

A mirror. A display. A new experience.

Revelo integrates a concealed digital display behind a reflective mirror surface, bringing digital content into premium spaces with a clean, considered appearance.

Reflection meets digital content

When activated, the display reveals content through the mirror surface. When switched off, the reflection remains central to the design. The appearance and degree of screen concealment depend on the selected glass, display and ambient lighting.

Designed around your space

Premium residences • Hotels and hospitality • Reception areas and showrooms • Selected elevator cabins

Create the experience you want

Explore welcome messages, images, videos, announcements and brand content. Content formats, playback, central management and interactive functions are selected and confirmed for each project.

Plan the right configuration

Share your mirror dimensions, display area, orientation, finish, location, quantity and intended content. Elevatech will assess the configuration, mounting, power, ventilation and service access requirements.

Elevator applications

Elevator installations require review with the elevator company for mounting, glass safety, weight, vibration, power and maintenance access. Floor indication, direction arrows and Pulse parameters can be assessed as separate integrations.

The Elevatech approach

We bring technologies and application knowledge together to support product selection, installation planning and service requirements. The agreed proposal will define the supported features and scope.

Let us plan your mirror display

Call +91 8485869310 | www.elevatech.in

Share your project location, quantity, dimensions and preferred content to start the discussion.

Configurations, environment suitability, availability, installation scope and warranty are confirmed in the project proposal. Touch, bathroom use, live content and integrations are model-dependent.
